Introduction & Instructions

This lesson plan book incorporates planning techniques advocated by some of the leading theorists and practitioners of instructional effectiveness. Techniques of Lesson Design and Writing Instructional Objectives are explained in detail. Samples of daily instructional objectives and steps of Lesson Design are provided as basic guidelines for the teacher.

LESSON DESIGN	INSTRUCT	IONAL OB	BJECTIVE	
Lesson design is one way a teacher might plan a lesson. Only the teacher can decide whether this is an appropriate plan for a particular lesson. The following may be situations in which the teacher might choose to use	An instructional objective is a picture of the learner after instruction. Listed below are examples of an instructional objective at each Taxonomy Level of Learning:			
all seven steps:		KN	IOWLEDGE	
 new learning not familiar with students' abilities, background, or experience students who don't "actable on" as readily as most 	KNOWLEDGE is a level of the hiera		bility to recall. It is at the lowest learning	
 students who don't "catch on" as readily as most learning is of the high thinking levels 	Learner behavior	define, desci	ribe, identify, list, match, name.	
 learning is at a high degree of difficulty remedial teaching 		ident will be abl ution is divided.	le to recall the seven sections into which the

 previous student performance indicates not all steps are needed lesson is extended over more than one day 	respon	sibilities of the I	egislative branch.	
Prerequisites: Students have been diagnosed.			PLICATION	
Can be formal, informal or intuitive.	to a new situation		ply an abstract concept, hypothesis or law	
A clear objective is in mind.			pute, operate, show, solve, demonstrate.	
A task analysis has identified critical attributes of the learning.	Example: The stu	ident will be abl	le to write a report using these skills in ote taking, outlining and writing.	
SEVEN STEPS		-	NALYSIS	
 1. ANTICIPATORY SET Opportunity for minds of learner to bring forward previous learning. An effective set will focus learner on task, provide meaning and involve learner. <i>Example:</i> • Review main ideas of yesterday's lesson which will be extended today. 	parts to understa Learner behavior	nd relationships —distinguish, d	break down information into its separate s between the parts. diagram, relate, discriminate, break down. are how the games of Canadian football and	
• Give synonyms for words, when objective is improvement of creative	Americ	an football are a	alike and how they are different.	
writing.			YNTHESIS	
2. OBJECTIVE PURPOSE States what the student will be able to do and why it is important. An instructional objective is a picture of the learner after instruction.	relationships in a	situation to for		
Example: • Given a decimal fraction, the learner will demonstrate understanding		<i>Learner behavior</i> —combine, compile, compose, create, design, rearrange.		
of the decimal fraction by writing an equivalent proper fraction.	<i>Example:</i> The student will devise a plan to take better care of science equipment.			
3. INPUT What you are going to teach. Somehow students need to get some information.			ALUATION	
Two questions are important:	EVALUATION is t		ke judgments on the basis of given criteria.	
1. What information do they need? 2. How will the information be delivered?	Learner behavior—appraise, conclude, criticize, compare, support, contrast.			
<i>Example:</i> • Teacher Talks • Book • Films		Example: The students will determine whether to build an amusement park		
Independent work Small group work Demonstrations	or keep	the land natura	al and will support their decision.	
4. MODELING Using visual techniques. Matching visual to the verbal. Students need to see an	SAMPLE			
accurate example of the product or process being taught.		OBJECTIVE	Students will apply the principles of the	
<i>Example:</i> • demonstration • example • picture			distributive property over addition to simplify	
5. MONITOR Check for understanding—sampling, signaling private responses.		PROCEDURES	algebraic expressions – Review multiplication of monomials	
<i>Closure</i> —students summarize the essential learnings. The teacher needs to plan for some means to check the understanding of			 Review manipication of nonormals Review addition of like terms Explain distributive property Students practice distributive prop. 	
individual students as well as entire class. 6. GUIDED PRACTICE		ASSIGNMENT	Prob. 7, 11, 20, 29, pg. 49 Prob. 17, 21, 31, pg. 52	

Time should be provided in class for the student to practice the concept or skill while the teacher is present and can monitor the students.

7. INDEPENDENT PRACTICE

This is a time outside class when the student will work on the learning without teacher assistance. (Homework)

NOTE: Spreading assignments over several days allows students to see past skills learned applied to new skills learned. Incorporates techniques in practice theory and transfer theory.

Prob. 1, 5, 8, 15, 19, 26, 30, 42, 50, pg. 54
