

## Frequently Asked Questions

### Get to know Liquitex® Professional Spray Paint™

#### If Liquitex Professional Spray Paint is water-based then does it wash away?

When wet, Liquitex Professional Spray Paint can be cleaned up with water and is easily removable from hands and skin. When dry, Liquitex Professional Spray Paint is as permanent, durable and weatherproof as solvent based spray paints.

#### How does the drying time compare to solvent based spray paints?

Due to the water-based technology, drying time is slightly longer than solvent based spray paints. Drying time is relative to ambient temperature, humidity and thickness of application. This offers the advantage of increased working time and the ability to mix with other Liquitex acrylics.

#### Can the product be used with acrylic paint and mediums?

Liquitex Professional Spray Paint is suitable for use with Liquitex Heavy Body, Liquitex Soft Body and Liquitex Mediums.

#### Where can Liquitex Professional Spray Paint be used?

Liquitex Professional Spray Paint is suitable for both interior and exterior applications.

#### What surfaces can Liquitex Professional Spray Paint be used on?

Liquitex Professional Spray Paint can be used on a variety of surfaces including canvas, masonry, glass, wood and metal.

#### Is the paint non-toxic?

According to labeling and packaging regulations the color is not classified as toxic. The Liquitex Professional Spray Paint bears the ACMI Cautionary Label. However, like other spray paints it should be used responsibly.

#### Does the product contain xylene, lead or CFC's?

No, Liquitex Professional Spray Paint does not contain lead, CFC's or any aromatic hydrocarbons.

#### What coverage can be achieved with a can of Liquitex Professional Spray Paint?

Coverage of approximately 6.5 sq. ft. can be achieved with a 400ml can.

#### Why isn't it 100% solvent free?

All spray paints require propellant to deliver the paint; the propellant cannot be water-based.

#### How long is the color stable in the can and how long can it be stored once open?

Liquitex Professional Spray Paint should have a two year shelf life.

#### Will the cap clog? Can these be cleaned?

Caps, particularly fine detail, can clog. They can be rinsed with soap and water or replaced. To prevent clogging turn the can upside down and spray for 5 seconds following use. The cap supplied with Liquitex Professional Spray Paint is suitable for achieving a variety of line thickness. Different effects can be achieved with different caps / nozzles – an assorted pack is available with 3 different cap size options. Alternatively a replacement standard cap pack is also available.

#### Are there storage requirements?

Liquitex Professional Spray Paint should not be stored in direct sunlight, near open flames or ignition sources or in temperatures exceeding 122 Degrees F (50 Degrees C).

#### Which varnish can be used with Liquitex Professional Spray Paint?

Liquitex Professional Spray Paint can be protected using Liquitex Soluvar Matte or Gloss Varnish. This is an archival varnish which is removable and suitable for interior and exterior use. 24 hours drying time is required before applying a varnish to Liquitex Professional Spray Paint.

**NEW**

**Liquitex® Professional Spray Paint**

Introducing Liquitex Professional Spray Paint, a stunning innovation developed for professional artists. Combining artist grade pigments with revolutionary water-based technology, Liquitex Professional Spray Paint offers color brilliance, lightfastness and durability in a unique low odor formulation. Special formulation is safe to use on Styrofoam®. Cans available in 400ml. Replacement caps are available in packs of 6, either standard or assorted featuring 2 each of standard, fat, and skinny caps.
