

★ Featured Display

Learning Objective: Solve real-world word problems using addition and subtraction.

Celebrate class birthdays with a math surprise!

- Display the pieces from this set as shown.
- Write birthday-themed word problems on fronts of flash cards and the answers on backs. Decorate with stickers and store in Terrific Pockets™ on the display.

Examples of questions you could ask are:

Oz baked 13 cupcakes for the party. Maret ate 5 of them. How many cupcakes are left?

Maggie has 14 party horns. How many more does she need to have enough for 20 guests?

Tim invited 12 friends to his party. Five were from his soccer team. The rest are friends from camp. How many friends from camp did Tim invite?

Elsa had 20 balloons, but 7 of them popped. How many balloons are left?

Shelby is 8 years old, yet there are only 3 candles on her cake. How many candles should be added?

- Birthday boys and girls choose three word problems, read the questions, and ask the class for answers.

Celebrate correct answers with an enthusiastic class cheer...
Hoot Hoot Hooray!
