 School Specialty[®]

This bundle gives our customers a quick and easy way to purchase a full Calming Sensory Room!

If relaxation, calming and de-escalation is the name of the game then this bundle is the perfect solution.

Featuring a 60" Calming LED Bubble Tube and soft padded platform, a user can sit close to the tube and watch as the bubbles steadily rise and the colors slowly change. The mirror ball produces spots of light that rotate around the room while the projector shows calming images that slowly rotate, creating a wonderful soothing environment.

A Fiber Optic Carpet with slowly changing spots of light is a terrific place to lie down and relax while watching the projector images and listening to calming music.

The Fiber Optic Softie provides a comfortable seat in which an individual can get close to the fiber optic strands and handle them while they slowly change color. These strands have no electricity in them.....only light, so they're safe to handle and provide a wonderfully tactile experience.

This bundle was designed for school and other facilities who have individuals that may need to de-escalate and relax, perhaps at key times during the day before they become overwhelmed with their environment and act out.

All electrical products in the bundle operate on standard 110v AC power transformed to low voltage.
