If you are new to sensory rooms and want a standard interactive room to build upon, then this bundle is for you!

There are 3 items that are nearly always found in a sensory room -- a bubble tube, fiber optics and a projector -- and this bundle has them all!

Included is the Superactive LED Bubble Tube, which can be used to develop basic life skills such as color recognition and switching skills, or can be used to promote a calming and relaxing environment. A soft platform surrounding the tube and safe acrylic mirrors greatly enhance the visual effect of the bubble tube, while the projector helps add ambience and theming to the room.

Complete with a wheel rotator and 3 effects wheels, the image from the projector can be shone onto a wall or floor to suit an individual's needs. You can also add additional effects wheels of all kinds to customize your room, or to create different themes and support a variety of language.

The fiber optic strands are wonderfully tactile and can be placed on a user's lap for close work and handling. Extremely easy to use, all Superactive products come complete with a wireless controller which allows the consumer the opportunity to change the colors of the

Superactive product anywhere in the room, up to a distance of up to 90ft. Rooms that use our wireless controller are generally tidier and safer, as there are no cables to trip over. These controllers now charge using a wireless charging technology and an internal lithium polymer battery, which means no more replacing batteries....simply charge the controllers up every night!

The equipment can also be used in a calming mode when desired, with slowly changing colors for relaxation or de-escalation. Superactive products automatically start this mode if no button is activated for a period of 5 minutes.

Electrical products in the bundle operate on standard 110v AC power transformed to low voltage with the included transformers.

This bundle gives our customers a quick and easy way to purchase a full Calming Sensory Room!

If relaxation, calming and de-escalation is the name of the game then this bundle is the perfect solution.

Featuring a 60" Calming LED Bubble Tube and soft padded platform, a user can sit close to the tube and watch as the bubbles steadily rise and the colors slowly change. The mirror ball produces spots of light that rotate around the room while the projector shows calming images that slowly rotate, creating a wonderful soothing environment.

A Fiber Optic Carpet with slowly changing spots of light is a terrific place to lie down and relax while watching the projector images and listening to calming music.

The Fiber Optic Softie provides a comfortable seat in which an individual can get close to the fiber optic strands and handle them while they slowly change color. These strands have no electricity in them.....only light, so they're safe to handle and provide a wonderfully tactile experience.

This bundle was designed for school and other facilities who have individuals that may need to de-escalate and relax, perhaps at key times during the day before they become overwhelmed with their environment and act out.

All electrical products in the bundle operate on standard 110v AC power transformed to low voltage.

This bundle allows our customers a quick and easy way to purchase a full sensory room, with no need to wait for a sensory room design. The bundle is already planned to fit into the corner of any room (assuming no obstructions) and is easy to install. Featuring all of the key ingredients of any sensory room: bubble tube, fiber optics, projection, soft padding, and more! This is a full sensory room with all the hassle taken away!

Perfect for interaction or calming, the equipment can be used for a variety of purposes, including the development of switching skills, cause and effect, color recognition, color matching, motor skills, social interaction and more.

The bundle includes our Superactive LED Bubble Tube with wireless controller, allowing an individual to control the color and bubbles in the tube from a distance of up to 90ft. Likewise, the Fiber Optic Bundle comes with an 8-color controller, and provides for a unique tactile and visual experience. There is no electricity in the fiberoptic strands—only light—which means they are completely safe for up-close work. These controllers now charge using a wireless charging technology and an internal lithium polymer battery, which means no more replacing batteries. Simply charge the controllers up every night!

The Aurora projector, complete with a wheel rotator and 3 effects wheels, adds to the sensory experience, and helps to create a variety of themes. The image from the projector can be shone onto a wall or floor to suit an individual's needs, and additional effects wheels of all kinds can be added to further customize your room, or to create different themes and support a variety of language.

A soft padded platform surrounds the bubble tube and allows the user to sit close and feel its vibrations, while mirrors give the effect of multiple tubes. Soft, thick wall and floor padding is also included to create a 'safe' area for people to sit or lie down and enjoy the calming music and lighting.

Also included is a Mirror Ball and Pin Spot, generated sparkles of light throughout the room, and 5 calming nature sound CDs.

All electrical products in the bundle operate on standard 110v AC power transformed to low voltage.

Here is a quick and easy way to purchase a full Superactive Sensory Room!

Featuring many of our wireless Superactive products, this bundle can be used to help develop cause & effect skills, color recognition, switching skills, vocalization, social interaction and much more.

This bundle can also be used to create a room ideal for theming and storytelling - great for customers who want to create a 'full body' experience.

The Superactive equipment can also be used in a calming mode with slowly changing colors for individuals who need de-escalation and relaxation, or even for those with dementia. This mode automatically starts if no button is activated for a period of 5 minutes. Extremely easy to use, all Superactive products come complete with a wireless controller which allows the user the opportunity to change the color of various products from anywhere in the room, up to a distance of up to 90 ft. These controllers now charge using a wireless charging technology and an internal lithium polymer battery, which means no more replacing batteries. Simply charge the controllers up every night!

In addition to standard therapy room equipment such as bubble tubes, projection and fiber optic bundles, this room also features a Fanlite, which responds to voice and sound inputs to create a sound-based light show. You can choose from 8 different lighting response modes. Also included is a Superactive Infinity Tunnel, which has different colored LED lights that appear to travel deep into the wall and can be used to facilitate speech patterns and self awareness. Also included is a wall-mounted fiber optic cascade, which is a great way for someone wheelchair-bound to access and enjoy the fiber optic strands. Or, anyone can just pretend it's raining light!

All electrical products in the bundle operate on standard 110v AC power transformed to low voltage.

Special Needs & Education

The IRiS Wireless Sensory Room is Experia USA's top of the line Wireless Sensory Room including our revolutionary IRiS™ line of products. These can be used to develop cause & effect skills, color recognition, switching skills, vocalization, social interaction and much more!

Unlike Superactive products, where one controller is linked to one product, IRiS™ controllers – called "Talkers" – can be simultaneously linked to as many different products (called "Listeners") as you want! Or you can link a Talker to only one, or a few, Listeners so that multiple individuals can enjoy the interactivity. Additionally we carry many more "Talkers" to expand your IRiS™ room's functionality in the future. Everyone deserves the opportunity to have control over their environment, even if they can't press a button on a controller.

This room can also be used as a calming environment, simply by not activating the controllers for 5 minutes. After that, each piece of equipment will begin to slowly change colors on their own.

The IRiS™ Sensory Room also includes the iConverter, which enables control of all of the equipment using your own iPad or iPhone. The free, unique Experia App comes with a variety of modes, including a sound switch to allow voice control, a vibration switch for those who lack fine motor control, and many other modes.

There is nothing more flexible and expandable than the IRiS™ Sensory Room, and nothing will accommodate more students' sensory needs.

All electrical products operate 110v AC power transformed to low voltage.
